

SMIL-Player AnyTiles

Freeform Video Wall software solution

Conventional video walls are limited by the number of screens that can be connected. The technology used by AnyTiles („Distributed Graphics Architecture“) virtually allows you to create artistically-shaped, infinite-resolution video walls

High-resolution 4K playback

Each tile in a freeform video wall play a dedicated video file up to 4K resolution. The total display resolution increases without bound as more screens are added to the wall. AnyTiles enable them to synchronize accurately to compose a grand view that delivers an impactful experience.

Infinitely scalable

To create a Video Wall with AnyTiles, one media player is required per screen (currently SMIL-Player Pro III 4K) and the AnyTiles software available with the licenses free of charge. Since one video-based media player is used per screen, video wall solutions can be realized without restrictions.

Simple and flexible arrangement

Freeform video wall systems are composed of multiple LCD screens tiled at angles to form irregular shapes. Due to their unexpected forms, they are often excellent at attracting viewers' attention.

Dynamic content

AnyTiles differs from competing solutions, which are limited to video contents only. The highly versatile AnyTiles platform supports HTML5 and desktop mirroring to play live content and enable interactivity.

Highlights

- Regular Video Wall
- Freeform Video Wall
- Bezel Kompensation

Suitable for

- Airports
- Sports facilities
- Concerts
- Trade fairs
- Hotels
- Retail

Technical Specification

Content

For maximum clarity and best synchronization, use a HEVC/H.265-encoded 4K video @ 60 fps. H.264 videos at 1080p resolution will work too.

Players

A professional video wall controller ensures reliability and serviceability to minimize your field effort. Use certified IAdea AnyTiles players to build your video walls.

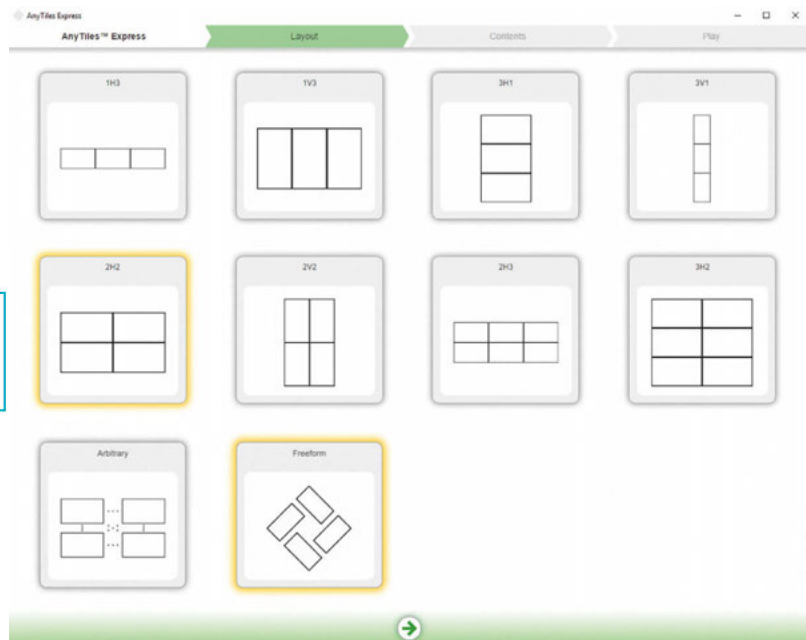

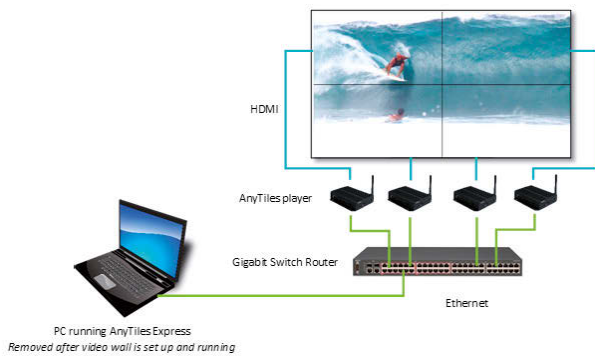

Screens

For the best result, you should use professional public displays to avoid color discrepancy. Consult your screen provider for recommendations.

Accessories

You will need a gigabit switching router to connect the video wall players. For best performance, the video wall network should be separated from your corporate network.
